Introduction

This configuration drew heavy inspiration from both kickstart.nvim and it's derivative kickstart.nixvim

Run

Temporarily run neovim configuration by installing nix and running the following

```
nix run github:AyushmaanAggarwal/nixvim-config
```

Install

Install the neovim configuration by adding the following to a nix-flakes setup
Add the input to `flake.nix`

```
inputs.nixvim-config.url = "github:AyushmaanAggarwal/nixvim-config";
```

and then add the package

```
{inputs, system, ...}: {
  environment.systemPackages = [ inputs.nixvim-flake.packages.${system}.default ];
}
```
